

Academic Improvement Scholarship

GUO PENGFEI

Associate of Engineering

Pengfei considers positive thinking the main reason for his turnaround in academic results. He has tried to be as efficient as possible in his work so that more time can be spared to understand what his teachers taught him in the lessons. Whenever he has free time, he goes about satisfying his thirst for knowledge by further research, because he thinks "Doubt is the key to knowledge". During semester breaks, he augmented his studies by being a product engineer in an electronics company. Always wanting to better himself and never afraid of hard work, Pengfei believes that tackling challenges head-on is the only way to improve.
